*Attorneys for Plaintiff*

IN THE UNITED STATES DISTRICT COURT  
FOR THE WESTERN DISTRICT OF WASHINGTON  
AT SEATTLE

WILD FISH CONSERVANCY,

Plaintiff,

v.

COOKE AQUACULTURE PACIFIC, LLC,

Defendant.

Case No. 2:17-cv-01708

COMPLAINT

## I. INTRODUCTION

1  
2 1. This action is a citizen suit brought under Section 505 of the Clean Water Act  
3 (“CWA”), 33 U.S.C. § 1365, by plaintiff Wild Fish Conservancy (the “Conservancy”) against  
4 Defendant Cooke Aquaculture Pacific, LLC (“Cooke”) for repeated and ongoing violations of  
5 Sections 301(a) and 402 of the CWA, 33 U.S.C. §§ 1311(a) and 1342, and the terms and  
6 conditions of Cooke’s National Pollutant Discharge Elimination System (“NPDES”) permits  
7 authorizing discharges of pollutants from Cooke’s commercial Atlantic salmon farms located in  
8 Puget Sound, Washington, into navigable waters.  
9

10  
11 2. The Conservancy seeks a declaratory judgment, injunctive relief, the imposition  
12 of civil penalties, and the award of costs, including attorneys’ and expert witness fees.

## II. JURISDICTION AND VENUE

13  
14 3. The Court has subject matter jurisdiction over the Conservancy’s claims under  
15 section 505(a) of the CWA, 33 U.S.C. § 1365(a), and 28 U.S.C. § 1331 (federal question). Cooke  
16 is in violation of an “effluent limitation or standard” as defined by Section 505(f) of the CWA,  
17 33 U.S.C. § 1365(f). Sections 505(a), 505(d), and 309(d) of the CWA, 33 U.S.C. § 1365(a) and  
18 (d) and 1319(d), authorize the requested relief.  
19

20  
21 4. In accordance with section 505(b)(1)(A) of the CWA, 33 U.S.C. § 1365(b)(1)(A),  
22 and 40 C.F.R. § 135.2, the Conservancy notified Cooke of its violations and of the  
23 Conservancy’s intent to sue by letters dated and postmarked August 24, 2017 (“Notice Letter”),  
24 and September 6, 2017 (“Supplemental Notice Letter”). Copies of the Notice Letter and  
25 Supplemental Notice Letter are attached to this Complaint as Exhibit 1 and Exhibit 2,  
26 respectively. The allegations in the Notice Letter and Supplemental Notice Letter are  
27 incorporated herein by this reference. In accordance with section 505(b)(1)(A) of the CWA, 33  
28  
29

1 U.S.C. § 1365(b)(1)(A), and 40 C.F.R. § 135.2(a)(1), the Conservancy notified Cooke's  
 2 Registered Agent, the Administrator of the United States Environmental Protection Agency  
 3 ("EPA"), the Regional Administrator of Region 10 of the EPA, and the Director of the  
 4 Washington Department of Ecology ("Ecology"), of its intent to sue Cooke by mailing copies of  
 5 the Notice Letter and Supplemental Notice Letter to these officials on August 24, 2017, and  
 6 September 6, 2017, respectively.

8 5. At the time of the filing of this Complaint, more than sixty days have passed since  
 9 the Notice Letter and Supplemental Notice Letter and the copies thereof were issued as described  
 10 in the preceding paragraph.

12 6. No agency, including EPA and Ecology, has commenced any action constituting  
 13 diligent prosecution to redress these violations.

14 7. The violations complained of in the Notice Letter and the Supplemental Notice  
 15 Letter are continuing or are reasonably likely to continue to reoccur. Cooke is in violation of the  
 16 CWA.

18 8. The sources of the violations complained of are located within the Western  
 19 District of Washington and venue is therefore appropriate in this district under section 505(c)(1)  
 20 of the CWA, 33 U.S.C. § 1365(c)(1). Cooke operates eight commercial salmon farms within the  
 21 Western District of Washington that are the subject of this complaint; four are located in Skagit  
 22 County, one is located in Clallam County, and three are located in Kitsap County.

### 24 III. PARTIES

25 9. Plaintiff Wild Fish Conservancy is a membership-based 501(c)(3) nonprofit  
 26 organization incorporated in the State of Washington with its principal place of business in  
 27 Duvall, Washington. Wild Fish Conservancy is dedicated to the preservation and recovery of  
 28

1 Washington's native fish species and the ecosystems upon which those species depend. Wild  
2 Fish Conservancy brings this action on behalf of itself and its approximately 2,400 members.  
3 Wild Fish Conservancy changed its name from "Washington Trout" in 2007. As an  
4 environmental watchdog, Wild Fish Conservancy actively informs the public on matters  
5 affecting water quality, fish, and fish habitat in the State of Washington through publications,  
6 commentary to the press, and sponsorship of educational programs. Wild Fish Conservancy also  
7 conducts field research on wild fish populations and has designed and implemented habitat  
8 restoration projects. Wild Fish Conservancy lobbies, advocates, and publicly comments on  
9 federal and state actions that affect the region's native fish and ecosystems. Wild Fish  
10 Conservancy routinely seeks to compel government agencies to follow the laws designed to  
11 protect native fish species, particularly threatened and endangered species.  
12  
13

14 10. The Conservancy has representational standing to bring this action. The  
15 Conservancy's members regularly spend time in estuarine, nearshore, and marine areas  
16 throughout Puget Sound, including in waters near Cooke's net pen facilities. The Conservancy's  
17 members intend to continue to visit these areas on a regular basis, including in the coming  
18 months and beyond. These members observe, study, photograph, and appreciate wildlife and  
19 wildlife habitat in and around these waters and their tributaries. These members also fish, hike,  
20 camp, and swim in and around these waters and their tributaries.  
21  
22

23 11. The Conservancy's members derive scientific, educational, recreational, health,  
24 conservation, spiritual, and aesthetic benefits from Puget Sound and its tributaries, the  
25 surrounding areas, and from wild native fish species in those waters and from the existence of  
26 natural, wild and healthy ecosystems.  
27  
28  
29

1           12.     The past, present, and future enjoyment of the Conservancy's interests and those  
2 of its members, including their recreational, aesthetic, spiritual, and scientific interests, have  
3 been, are being, and will continue to be harmed by Cooke's violations of the CWA and NPDES  
4 permits addressed herein, including Cooke's illegal discharges of pollutants from its Atlantic  
5 salmon net pen facilities, and by the members' reasonable concerns related to violations. These  
6 injuries include reduced enjoyment of time spent in and around Puget Sound and its tributaries,  
7 including waters near the commercial salmon farms, and refraining from engaging in certain  
8 activities while visiting these areas. These injuries are fairly traceable to the violations and  
9 redressable by the Court.  
10

11           13.     The Conservancy has organizational standing to bring this action. The  
12 Conservancy has been actively engaged in a variety of educational and advocacy efforts to  
13 improve habitat, including water quality, in Puget Sound and its tributaries. The Conservancy  
14 has been particularly active in efforts to educate the public and government officials throughout  
15 the Puget Sound region on the impacts of commercial aquaculture, and specifically the impacts  
16 of Cooke's eight commercial salmon farms in Puget Sound. Cooke's failure to comply with its  
17 NPDES permits' Fish Release Prevention and Monitoring Plan requirements—including, but not  
18 limited to, failing to submit annual Fish Release Reports that include all of the required  
19 information—has deprived the Conservancy of information that otherwise would be available  
20 and used to the Conservancy in its educational and advocacy efforts. This information could  
21 assist the Conservancy in its ongoing efforts to educate and advocate for greater wild fish and  
22 environmental protection. Finally, the Conservancy and the public are deprived of information  
23 that influences members of the public to become members of the Conservancy. Thus, the  
24  
25  
26  
27  
28  
29

1 Conservancy's organizational interests have been and are being adversely affected by Cooke's  
2 violations. These injuries are fairly traceable to the violations and redressable by the Court.

3 14. Cooke Aquaculture Pacific, LLC acquired, or changed its name from, Icicle  
4 Acquisition Subsidiary LLC d/b/a American Gold Seafoods on or about June 11, 2016. Cooke is  
5 a corporation authorized to conduct business under the laws of the State of Washington.  
6

7 15. Cooke owns and operates eight commercial Atlantic salmon net pen facilities in  
8 Puget Sound.

9  
10 **IV. LEGAL BACKGROUND**

11 16. Section 301(a) of the CWA, 33 U.S.C. § 1311(a), makes unlawful the discharge  
12 of any pollutant by any person unless authorized by, *inter alia*, a NPDES permit issued pursuant  
13 to section 402 of the CWA, 33 U.S.C. § 1342.

14 17. Section 502(12) of the CWA, 33 U.S.C. § 1362(12), defines "discharge of a  
15 pollutant" to include "any addition of any pollutant to navigable waters from any point source."  
16

17 18. Section 502(7) of the CWA, 33 U.S.C. § 1362(7), defines the term "navigable  
18 waters" as "the waters of the United States, including the territorial seas."

19 19. Section 502(14) of the CWA, 33 U.S.C. § 1362(14), defines "point source" as  
20 "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch,  
21 channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal  
22 feeding operation, or vessel or other floating craft, from which pollutants are or may be  
23 discharged."  
24

25 20. EPA has issued a regulation that defines the term "point source" to include  
26 "concentrated aquatic animal production facilities," which EPA defines to include marine  
27 salmon net pens that discharge at least 30 days per year, produce more than 20,000 pounds of  
28  
29

1 salmon per year, or feed more than 5,000 pounds of food in the month of maximum feeding. 40  
2 C.F.R. § 122.24 and 40 C.F.R. § 122 Appendix C.

3 21. Section 402 of the CWA provides that the EPA may issue NPDES permits  
4 authorizing discharges. 33 U.S.C. § 1342. The CWA implements a technology-forcing approach  
5 under which increasingly stringent NPDES permit requirements are imposed over time in an  
6 effort to fulfill the CWA's goal of eliminating pollution. NPDES permits therefore are valid for a  
7 period not to exceed five years, after which new permits are required that incorporate any new  
8 and more stringent standards. *See* 33 U.S.C. §§ 1342(a)(3), (b)(1)(B).

9 22. Expiring NPDES permits continue and remain effective and enforceable if the  
10 permittee timely submits a complete application for a new permit and EPA, through no fault of  
11 the permittee, does not issue a new permit prior to expiration. 40 C.F.R. § 122.6; 5 U.S.C. §  
12 558(c). Applications to renew an expiring NPDES permit are timely if submitted at least 180  
13 days before the expiration date. 40 C.F.R. § 122.21(d)(2).

14 23. The State of Washington has established a federally approved state NPDES  
15 program administered by Ecology. Wash. Rev. Code § 90.48.260; Wash. Admin. Code ch. 173-  
16 220. This program was approved by the Administrator of EPA under Section 402(b) of the  
17 CWA, 33 U.S.C. § 1342(b).

## 18 **V. FACTUAL BACKGROUND**

19 24. Puget Sound and its tributaries contain natural, wild populations of fish, including  
20 various species of rockfish, steelhead trout, bull trout, searun cutthroat trout, coho salmon,  
21 sockeye salmon, pink salmon, chum salmon, Chinook salmon, and other fish species, and  
22 provide important habitat for these species.

1           25.     Cooke owns and/or operates eight of the commercial salmon net pen facilities  
2 located in Puget Sound, Washington, where Cooke produces Atlantic salmon. Three of the net  
3 pen facilities are located in Cypress Island's Deepwater Bay, in Skagit County. One net pen  
4 facility is located in Skagit Bay north of Hope Island, also within Skagit County. Three of the net  
5 pen facilities are located south of Bainbridge Island in Rich Passage, within Kitsap County. One  
6 net pen facility is located near Port Angeles, in Clallam County.

8           26.     Commercial salmon farms house fish in net pens, which are floating facilities that  
9 contain young and mature salmon in permeable enclosures, such as netting, in open water. The  
10 fish are hatched at freshwater hatcheries and the smolts are transferred to the marine net pens  
11 where they are cultivated to a marketable size. Due to characteristics conducive to commercial  
12 success, Atlantic salmon are the primary species raised.

14           27.     Each of Cooke's eight commercial salmon farms in Puget Sound qualifies as a  
15 concentrated aquatic animal production facility and is considered a "point source" of pollution  
16 under 40 C.F.R. § 122.24 and 40 C.F.R. § 122 Appendix C. Specifically, each facility discharges  
17 pollutants in excess of 30 days per year and produces more than 20,000 pounds of salmon per  
18 year or feeds more than 5,000 pounds of food in the month of maximum feeding.

20           28.     Cooke is authorized to discharge waste materials associated with its Atlantic  
21 salmon net pen operations under eight NPDES permits issued by Ecology on October 26, 2007,  
22 which expired but have been administratively continued since October 26, 2012, under NPDES  
23 permit numbers WA-003153-4, WA-003154-2, WA-003152-6, WA-003156-9, WA-003157-7,  
24 WA-003158-5, WA-003159-3, and WA-004089-4 (collectively, the "Permits").  
25  
26  
27  
28  
29

1           29.     The Permits impose terms and conditions intended to protect water quality,  
2 including restrictions on discharges, pollution prevention requirements, fish release prevention  
3 and monitoring requirements, and recordkeeping and reporting requirements.

4           30.     One of Cooke's net pen facilities located in Deepwater Bay of Cypress Island is  
5 referred to as "Cypress Site 2" (also known as "Site 2 – Deepwater Bay") and is subject to  
6 NPDES permit number WA-003157-7. The Cypress Site 2 facility is a floating steel raft,  
7 containing ten individual cages (2 rows of 5 cages), and has been in operation since 1985. The  
8 net pen structure has a surface area of approximately 80,154 square feet.

9           31.     In 2009 and/or 2011, Cooke repositioned its Cypress Site 2 facility into deeper  
10 waters with higher current velocities in an effort to increase water circulation and sediment  
11 flushing due to benthic impacts from the facility that exceeded limits in the Permits, without  
12 making any changes to facility's operational or physical structures.

13           32.     On or about July 24, 2017, moorings at Cypress Site 2 began to fail. At least ten  
14 anchor points on the net pens broke and numerous others dragged, which shifted the positioning  
15 of the site considerably. While Cooke made some effort to re-secure Cypress Site 2, the moorage  
16 anchors that had been replaced broke free again on July 25, 2017. Cooke again worked to reset  
17 and replace the mooring system from July 25 through July 29, 2017.

18           33.     Starting on or about Saturday, August 19, 2017, Cypress Site 2 suffered  
19 additional mooring and other structural failures, resulting in a near-complete collapse on or about  
20 Sunday, August 20, 2017. The images below show Cypress Site 2 before and after this incident.  
21  
22  
23  
24  
25  
26  
27  
28  
29

34. The Cypress Site 2 facility's failure was the result of Cooke's negligence and its failure to inspect and maintain the facility as required under the Permits.

35. Upon information and belief, Cooke was aware at least six months before the Cypress Site 2 facility collapsed that the facility was nearing the end of its serviceable life and was due for complete replacement, that corrosion on the metal walkway grating and substructures was accelerating, and that the metal hinge joints were showing signs of excessive wear.

36. Cooke was also aware that the Cypress Site 2 facility was misaligned to the prevailing tidal currents, and that repositioning the net pens with the narrow ends facing the prevailing currents at the site was necessary to reduce the drag loads exerted on the nets, mooring points, net pen structure, and to improve the overall safety of the facility.

1           37.     Non-native Atlantic salmon released from net pen facilities are pollutants under  
2 the CWA.

3           38.     The failure of Cooke's Cypress Site 2 facility resulted in massive discharges of  
4 various pollutants into Puget Sound, including but not limited to, non-native Atlantic salmon,  
5 debris, solid and liquid wastes, nets, feed, machinery, equipment, walkways, moorings and other  
6 structures, fuels, greases, oils, and other petroleum products. These discharges are not authorized  
7 by Cooke's Permits. *See* Permits, Condition S1 (Cooke is authorized to "discharge waste  
8 materials associated with marine salmon net pen operations."). The discharges are therefore  
9 prohibited by Section 301(a) of the CWA, 33 U.S.C. § 1311(a).  
10  
11

12           39.     Cooke's Permits prohibit the intentional or negligent release of Atlantic salmon  
13 from the net pen facilities. Permits, Condition S1. Cooke began releasing fish from its Cypress  
14 Site 2 facility on or about August 19, 2017. These releases are intentional or negligent and  
15 therefore violate Condition S1 of the Permits. Currently available information indicates that  
16 Cooke released at least approximately 165,000 and up to 305,000 Atlantic salmon into Puget  
17 Sound, many of which remain in Puget Sound today and each of which constitutes a violation of  
18 the Permits.  
19  
20

21           40.     Ecology issued Agreed Order, Docket No. 15422, dated September 15, 2017.  
22 Cooke consented to the Agreed Order and agreed not to contest it. The Agreed Order includes a  
23 finding by Ecology that Cooke's release of Atlantic salmon from the Cypress Site 2 that began  
24 on or about August 19, 2017, is a violation of the Permit.  
25

26           41.     The Permits require that Cooke "collect and store fish carcasses in leakproof  
27 containers" and prohibit Cooke from disposing of carcasses in surface waters. Permits, Condition  
28 S5.A.7. Further, Cooke "must store and dispose of fish mortalities, harvest blood, and leachate  
29

1 from these materials in a manner which prevents such materials from entering waters of the  
2 state.” Permits, Condition S5.A.8. Cooke has violated these requirements with respect to the  
3 Cypress Site 2 facility because Cooke has failed to collect and store all fish carcasses in  
4 leakproof containers and failed to store and dispose of fish mortalities and blood in a manner that  
5 prevents such materials from entering waters of the state.  
6

7 42. The Permits provide that Cooke “must dispose of accumulated solids and attached  
8 marine growth contained within or on the net pens in a manner which prevents to the maximum  
9 extent practicable these materials from entering or reentering waters of the state.” Permits,  
10 Condition S5.A.9. Cooke is further prohibited from discharging “accumulated solids and marine  
11 growth removed from the finfish rearing units into waters of the state without prior treatment.”  
12 Permits, Condition S5.A.10. Cooke is violating these requirements by failing to dispose of solids  
13 and growth in a manner that prevents to the maximum extent practicable the materials from  
14 entering or reentering waters of the state and by discharging solids and growth without prior  
15 treatment from its net pen facilities located in Deepwater Bay of Cypress Island.  
16  
17

18 43. The Permits prohibit Cooke from “discharging sanitary wastes, floating solids,  
19 visible foam other than in trace amounts, or oily wastes which produce sheen on the surface of  
20 the receiving water.” Permits, Condition S5.A.12. Cooke is in violation of these requirements for  
21 discharging prohibited materials from its Cypress Site 2 facility.  
22

23 44. Upon information and belief, Cooke is violating the Permits’ predator net pen  
24 requirements at its net pen facilities in Deepwater Bay of Cypress Island by failing to maintain  
25 predator nets above the sea floor; storing nets on the sea floor; failing to immediately tag with  
26 floats nets dropped or lost, position the nets using differential GPS, and report the dropped or  
27 lost nets to Ecology with 24 hours.  
28  
29

1           45.     Condition S6 of the Permits requires that Cooke prepare a Pollution Prevention  
 2 Plan for each net pen facility that addresses “operations, spill prevention, spill response, solid  
 3 waste, and stormwater discharge practices which will prevent or minimize the release of  
 4 pollutants from the facility to waters of the state.” Cooke is required to “assure that the  
 5 operations staff for the facility is familiar with the plan and have been adequately trained in the  
 6 specific procedures which it required.” Permits, Condition S6. Cooke “must operate the facility  
 7 in accordance with this plan along with any subsequent amendments or revisions.” *Id.*

9           46.     For each facility, the Pollution Prevention Plan must require Cooke to “routinely,  
 10 at least weekly, conduct visual inspections of exposed surface lines, shackles, and mooring  
 11 points;” repair or replace defective components promptly; conduct an inspection of the main  
 12 cage structure and anchoring components above and below the water line at least once per year;  
 13 “[d]ocument any problems and maintain all components to prevent failure that could lead to fish  
 14 escapements;” and “conduct inspections after any major storm event or physical accident  
 15 involving the pen structures or moorings, and make any repairs necessary.” Permits, Condition  
 16 S6.F.

19           47.     Cooke has violated and continued to violate the requirements of Condition S6 of  
 20 the Permits at each of its eight commercial salmon farms in Puget Sound. Cooke has failed and  
 21 continues to fail to prepare and/or implement a Pollution Prevention Plan that meets all of the  
 22 requirements of Condition S6 of the Permits for each of its net pen facilities. Additionally,  
 23 Cooke has failed and continues to fail to conduct required inspections, repairs and replacements,  
 24 failed to document problems, and failed to maintain components to prevent failures that could  
 25 lead to fish escapements. For example, Cooke’s latest 2017 Pollution Prevention Plan does not  
 26 require Cooke to conduct inspection of exposed surface lines, shackles, and mooring points at  
 27  
 28  
 29

1 least weekly. It also does not require Cooke to inspect anchoring components above and below  
2 the waterline at least annually, nor does it require any inspection of the main cage structures.  
3 Cooke's prior 2012 Pollution Prevention Plan contains the same or substantially similar  
4 deficiencies.

5  
6 48. Failure to develop and implement an adequate Pollution Prevention Plan is a  
7 violation of Cooke's Permits. Every day that Cooke fails to develop and/or implement a  
8 Pollution Prevention Plan for a facility is a separate and distinct violation of the Permits. These  
9 violations have occurred on each and every day during the last five years and sixty days and  
10 continue to occur every day.  
11

12 49. The Permits require Cooke to maintain a Fish Release Prevention and Monitoring  
13 Plan that includes the identification and implementation of technology that will minimize fish  
14 escapements and procedures for routinely tracking the number of fish within the pens, the  
15 number of fish lost to predation and mortality, and the number lost due to escapement. Permits,  
16 Condition S7.1, 6. This plan also must include routine procedures and best management  
17 practices used to minimize the risk of escapement from the pens during normal operations.  
18 Condition S7.2.  
19

20  
21 50. Cooke must submit an Annual Fish Release Report to Ecology by January 30th of  
22 each year that summarizes release data for the prior year. Permits, Condition S7. The reports  
23 must summarize, to the extent possible, "by month and pen site, the number, age class, disease  
24 and medication history, and cause of all fish released to waters of the state, ... including all  
25 Significant Fish Releases." *Id.*  
26

27 51. Cooke has violated and continues to violate the requirements of Condition S7 of  
28 the Permits at all eight of its Puget Sound net pen facilities. For example, Cooke fails to identify  
29

1 and implement technology that will minimize fish escapements, fails to implement procedures to  
 2 track the number of fish in the net pen and those lost to predation, mortality and escapement, and  
 3 fails to submit annual Fish Release Reports that include all of the required information, including  
 4 all of the fish released and the cause thereof.

5  
 6 52. Failure to develop and implement an adequate Fish Release Prevention and  
 7 Monitoring Plan is a violation of Cooke's Permits. Every day that Cooke fails to develop and/or  
 8 implement an adequate Fish Release Prevention and Monitoring Plan at a net pen facility is a  
 9 separate and distinct violation of the Permits. These violations have occurred on each and every  
 10 day during the last five years and sixty days and continue to occur every day.  
 11

12 53. The Permits establish a Sediment Impact Zone ("SIZ") for each net pen facility  
 13 that consists of the area within a 100-foot perimeter of each net pen facility. Permits, Appendix  
 14 A. When net pens are "moved or removed," the Permits require that Cooke "conduct Closure  
 15 Monitoring in areas where the previous SIZ was established but is no longer in effect." Permits,  
 16 Condition S2.B.4. "The goal of closure monitoring is to monitor the return of sediment quality to  
 17 baseline conditions." Permits, Condition S4. Closure monitoring must include the parameters  
 18 listed in Condition S2.A.4 of the Permits and include benthic infaunal abundance as described in  
 19 Condition S2.D. Permits, Condition S4.  
 20  
 21

22 54. The Permits also require that Cooke submit a Sediment Sampling and Analysis  
 23 Plan ("SAP") to Ecology for review and approval "at least thirty (30) days<sup>1</sup> prior to [the]  
 24 anticipated site closure or significant move." Permits, Condition S2.B.4.  
 25  
 26  
 27

---

28 <sup>1</sup> The Permits also require, inconsistently, that Cooke submit a SAP "at least 60 days" before any  
 29 planned move or removal. Permits, Condition S4.

1           55.     Cooke has violated the Permits' sediment sampling and analysis plan  
2 requirements by moving, closing, and/or removing its Cypress Site 2 facility from its SIZ  
3 without complying with the provisions described above—including the requirements to submit a  
4 SAP to Ecology for approval at least 30 days prior to moving or removing/closing the facility.  
5 Every day that Cooke fails to submit a SAP is a separate and distinct violation of the Permits and  
6 the CWA. These violations began on or about August 19, 2017, have occurred on each and every  
7 day since that date, and continue to occur every day.  
8

9           56.     Upon information and belief, the violations of the CWA and the NPDES Permits  
10 addressed herein are ongoing and/or are reasonably likely to reoccur. Any and all additional  
11 violations of the CWA or Permits that occur after those described in the Notice Letter and  
12 Supplemental Notice Letter but before a final decision in this action should be considered  
13 continuing violations subject to this Complaint.  
14

15           57.     Cooke's commercial salmon farms have suffered sporadic and significant fish  
16 releases in the past, including a reported escape of approximately 24,550 Atlantic salmon in  
17 2005, and similar events are reasonably likely to reoccur.  
18

19           58.     Upon information and belief, Cooke is likely to negligently release Atlantic  
20 salmon from any of its eight net pen facilities in Puget Sound in the future. The Conservancy is  
21 unaware of any change in Cooke's Puget Sound net pen operations that will eliminate future  
22 negligent releases of Atlantic salmon.  
23

24           59.     Upon information and belief, Cooke has and will continue to operate and maintain  
25 each of its Puget Sound net pen facilities in the same manner as it did with its Cypress Site 2  
26 facility.  
27  
28  
29

60. The State of Washington Department of Natural Resources (“DNR”) recently inspected Cooke’s Rich Passage Clam Bay facility, after the collapse of Cypress Site 2, and reported widespread moderate corrosion damage and severe corrosion damage in localized areas. DNR also reported that one of the facilities drag anchors was completely on the surface on the sea floor, not buried, and that Cooke’s inspections of the facility did not follow the manufacturer’s recommendations or industry standards.

61. Without the imposition of appropriate civil penalties and the issuance of an injunction, Cooke is likely to continue to violate its Permits and the CWA to the further injury of the Conservancy, its members, and others.

62. Cooke’s violations of the CWA and its Permits were avoidable had Cooke been diligent in overseeing operations and maintenance at its commercial salmon farms.

63. Cooke has benefited economically as a consequence of its violations of the CWA and Permits, including through its failure maintain, repair, and replace its net pens and their components.

64. In accordance with Sections 505(c)(3) of the CWA, 33 U.S.C. § 1365(c)(3), and 40 C.F.R. § 135.4, the Conservancy will mail either a filed, date-stamped copy of this Complaint or a conformed copy of this Complaint after it is filed to the Administrator of the EPA, the Regional Administrator for Region 10 of EPA, and the Attorney General of the United States.

## VI. CLAIMS FOR RELIEF

### FIRST CLAIM FOR RELIEF

#### Cooke’s Violations of Section 301(a) of the CWA

65. The Conservancy hereby alleges and incorporates by reference all of the preceding paragraphs.

1           66.     The failure of Cooke’s Cypress Site 2 facility that began on or about August 19,  
2 2017, resulted in massive discharges of various pollutants into Puget Sound. These discharges  
3 are not authorized by Cooke’s Permits. These discharges constitute discharges of pollutants from  
4 a point source to waters of the United States that violate Section 301(a) of the CWA, 33 U.S.C. §  
5 1311(a).  
6

7           67.     These violations of Section 301(a) of the CWA, 33 U.S.C. § 1311(a), are  
8 violations of an “effluent limitation or standard,” as defined by Section 505(f) of the CWA, 33  
9 U.S.C. § 1365(f), that are enforceable in this citizen suit under section 505 of the CWA, 33  
10 U.S.C. § 1365.  
11

12                               SECOND CLAIM FOR RELIEF

13                               Cooke’s Violations of the Permits

14           68.     The Conservancy hereby alleges and incorporates by reference all of the  
15 preceding paragraphs.  
16

17           69.     Cooke has violated its Permits as described herein and in the Notice Letter and  
18 Supplemental Notice Letter.  
19

20           70.     Cooke’s violations of its Permits constitute violations of an “effluent limitation or  
21 standard,” as defined by Section 505(f) of the CWA, 33 U.S.C. § 1365(f), that are enforceable in  
22 this citizen suit under section 505 of the CWA, 33 U.S.C. § 1365.  
23

24                               **VII.   RELIEF REQUESTED**

25           WHEREFORE, the Conservancy respectfully requests that this Court:

26           A.     Issue a declaratory judgment that Cooke has violated and continues to be in  
27 violation of the Permits and Sections 301 and 402 of the Clean Water Act, 33 U.S.C. §§ 1311  
28 and 1342;  
29

1 B. Issue an injunction enjoining Cooke from operating its Atlantic salmon net pen  
2 facilities in a manner that results in further violations of the Permits or the CWA;

3 C. Issue an injunction requiring Cooke to take specific actions to evaluate and  
4 remediate the environmental harm caused by its violations;

5 D. Grant such other preliminary and/or permanent injunctive relief as the  
6 Conservancy may from time to time request during the pendency of this case;

7 E. Order Cooke to pay appropriate civil penalties up to the maximum authorized by  
8 the CWA of \$37,500.00 per day of violation for each violation committed by Cooke on or before  
9 November 2, 2015, and \$52,414.00 per day of violation for each violation committed by Cooke  
10 thereafter, pursuant to sections 309(d) and 505(d) of the CWA, 33 U.S.C. §§ 1319(d) and  
11 1365(a), and 40 C.F.R. § 19 (see also 81 Fed. Reg. 43091, 43095 (July 1, 2016));

12 F. Award the Conservancy its litigation expenses, including reasonable attorneys'  
13 fees and expert witness fees, as authorized by section 505(d) of the CWA, 33 U.S.C. § 1365(d),  
14 and any other applicable authorization; and

15 G. Grant the Conservancy such additional relief as the Court deems just and proper.

16 RESPECTFULLY SUBMITTED this 13th day of November, 2017.

Cooke Aquaculture Pacific, LLC  
P.O. Box 669  
Anacortes, Washington 98221

**Re: NOTICE OF INTENT TO SUE UNDER THE CLEAN WATER ACT**

Dear Managing Agent:

This letter is submitted on behalf of the Wild Fish Conservancy (the “Conservancy”). This letter provides sixty days’ notice of the Conservancy’s intent to file a citizen suit against Cooke Aquaculture Pacific, LLC (“Cooke<sup>1</sup>”) under section 505 of the Clean Water Act (“CWA”), 33 U.S.C. § 1365, for the violations described herein.

**I. Background.**

Cooke owns and/or operates eight commercial salmon net pen facilities located in Puget Sound, Washington, where Cooke produces Atlantic salmon. Three of these net pen facilities are located in Deepwater Bay of Cypress Island, three are located south of Bainbridge Island in Rich Passage, one is near Port Angeles, and one is north of Hope Island in Skagit Bay.

Cooke’s commercial salmon farms discharge pollutants to waters of the United States in a manner that is prohibited by section 301(a) of the CWA, 33 U.S.C. § 1311(a), unless, *inter alia*, authorized by National Pollutant Discharge Elimination System (“NPDES”) permits issued under section 402 of the CWA, 33 U.S.C. § 1342. Cooke is authorized to discharge waste materials associated with salmon net pen operations under eight NPDES permits issued by the Washington Department of Ecology (“Ecology”) on October 26, 2007, with expiration dates of October 26, 2012, but which have been administratively extended pending issuance of new permits, under NPDES permit numbers WA-003153-4, WA-003154-2, WA-003152-6, WA-003156-9, WA-003157-7, WA-003158-5, WA-003159-3, and WA-004089-4 (collectively, the “Permits”).

---

<sup>1</sup> Cooke Aquaculture Pacific LLC acquired, or changed its name from, Icicle Acquisition Subsidiary LLC d/b/a American Gold Seafoods on or about June 11, 2016. “Cooke,” as used herein, refers collectively to Cooke Aquaculture Pacific LLC and Icicle Acquisition Subsidiary LLC d/b/a American Gold Seafoods.

Starting on or about Saturday, August 19, 2017, one of Cooke's net pen facilities located in Deepwater Bay of Cypress Island began suffering structural failures. This net pen facility suffered a near-complete structural failure and collapsed on or about Sunday, August 20, 2017. The failure of these facilities has resulted in illegal discharges into Puget Sound of farmed Atlantic salmon, carcasses of dead fish, and massive amounts of debris and other pollutants. Currently available information suggests that these illegal releases are associated with Cooke's net pen facility known as "Cypress Site 2" (also known as "Site 2 – Deepwater Bay"), which is subject to NPDES permit number WA-003157-7.

## **II. Cooke's Unauthorized Discharges of Pollutants.**

The structural failure of Cooke's net pen facilities in Deepwater Bay of Cypress Island has resulted in massive discharges of various pollutants to Puget Sound, including, without limitation, non-native Atlantic salmon, debris, solid and liquid wastes, nets, feed, medications, pharmaceuticals, machinery, equipment, walkways, moorings, structures, ropes, cables, buoys, fuels, greases, oils, and other petroleum products. These discharges are not authorized by Cooke's Permits. *See* Permits, Condition S1 (Cooke is authorized to "discharge waste materials associated with marine salmon net pen operations."). Accordingly, Cooke is in violation of section 301(a) of the CWA, 33 U.S.C. § 1311(a), for discharging pollutants to Puget Sound without the authorization of an NPDES permit. These violations began on or about August 19, 2017, have occurred every day since that date, and are continuing to occur.

## **III. Cooke's Violations of the Permits.**

### **A. Violations of the Prohibition on Negligent Releases of Atlantic Salmon.**

The Permits provide:

The intentional or negligent release of Atlantic salmon to the receiving waters beyond the confines of the net pens is prohibited.

Permits, p. 5. Cooke is in violation of this provision by negligently (and/or intentionally) releasing Atlantic salmon from one or more of its commercial salmon net pen facilities in Puget Sound. Cooke began releasing the fish from its net pen facilities located in Deepwater Bay of Cypress Island on or about August 19, 2017. These illegal releases have occurred each and every day since August 19, 2017, and are continuing to occur. Currently available information indicates that Cooke has released up to 305,000 Atlantic salmon into Puget Sound, each of which constitutes a violation of the Permits.

### **B. Violations Related to the Disposal and Storage of Fish Mortalities.**

The Permits require that Cooke "collect and store fish carcasses in leakproof containers" and it prohibits Cooke from disposing of carcasses in surface waters. Permits, Condition S5.A.7. Further, Cooke "must store and dispose of fish mortalities, harvest blood, and leachate from these materials in a manner which prevents such materials from entering waters of the state." Permits, Condition S5.A.8. Cooke has violated these requirements with respect to the net pen

facilities located in Deepwater Bay of Cypress Island because Cooke has failed to collect and store all fish carcasses in leakproof containers and failed to store and dispose of fish mortalities and blood in a manner that prevents such materials from entering waters of the state. These violations began on or about August 19, 2017, have continued every day since that date, and are continuing to occur.

**C. Violations of the Prohibition on Discharging Solids and Marine Growth.**

The Permits provide that Cooke “must dispose of accumulated solids and attached marine growth contained within or on the net pens in a manner which prevents to the maximum extent practicable these materials from entering or reentering waters of the state.” Permits, Condition S5.A.9. Cooke is further prohibited from discharging “accumulated solids and marine growth removed from the finfish rearing units into waters of the state without prior treatment.” Permits, Condition S5.A.10. Cooke is violating these requirements by failing to dispose of solids and growth in a manner that prevents to the maximum extent practicable the materials from entering or reentering waters of the state and by discharging solids and growth without prior treatment from its net pen facilities located in Deepwater Bay of Cypress Island. These violations began on or about August 19, 2017, have continued every day since that date, and are continuing to occur.

**D. Violations of the Prohibition on Discharging Floating Solids, Visible Foam, and/or Oily Wastes.**

The Permits prohibit Cooke from “discharging sanitary wastes, floating solids, visible foam other than in trace amounts, or oily wastes which produce sheen on the surface of the receiving water.” Permits, Condition S5.A.12. Cooke is in violation of these requirements for discharging prohibited materials from its net pen facilities located in Deepwater Bay of Cypress Island. These illegal discharges began on or about August 19, 2017, have occurred each and every day since that date, and are continuing to occur.

**E. Violations of the Predator Net Requirements.**

The Permits provide:

When in use, predator nets shall be maintained above the sea floor at all times. Nets may not impede the current flow or tidal exchange so as to contribute to the deposition of solids that would impair water quality standards. The storage of predator control or containment nets on the sea floor is prohibited. Any net accidentally dropped or lost during a storm event that is not recovered immediately shall be tagged with a float, positioned using differential GPS, and reported to Ecology within 24 hours. The net shall be recovered within 30 days from the date lost, unless Ecology allows a longer time in an individual case. Ecology shall be notified on the date the net is recovered.

Permits, Condition S5.A.17. Upon information and belief, Cooke is violating these requirements at its net pen facilities in Deepwater Bay of Cypress Island by failing to maintain predator nets above the sea floor; impeding current flow with its nets in a

manner that contributes to impairment of water quality standards; storing nets on the sea floor; failing to immediately tag with floats nets dropped or lost, position the nets using differential GPS, and report the dropped or lost nets to Ecology with 24 hours. These violations began on or about August 19, 2017, have occurred each and every day since that date, and are continuing to occur. To the extent Cooke does not recover all of the dropped or lost nets within 30 days of the date lost, Cooke will also be in violation of that requirement.

#### **F. Violations of the Pollution Prevention Plan Requirements.**

The Permits require that Cooke prepare a Pollution Prevention Plan for each net pen facility that addresses “operations, spill prevention, spill response, solid waste, and stormwater discharge practices which will prevent or minimize the release of pollutants from the facility to waters of the state.” Condition S6. Cooke is required to “assure that the operations staff for the facility is familiar with the plan and have been adequately trained in the specific procedures which it required.” *Id.* Cooke “must operate the facility in accordance with this plan along with any subsequent amendments or revisions.” *Id.* Cooke has violated these requirements by failing to prepare and/or implement a plan that meets the requirements of the Permits for all eight of its net pen facilities located in Puget Sound. These violations have occurred on each and every day during the last five years and continue to occur every day.

For each facility, the plan’s provisions must ensure that Cooke “routinely, at least weekly, conduct visual inspections of exposed surface lines, shackles, and mooring points;” repair or replace defective components promptly; conduct an inspection of the main cage structure and anchoring components above and below the water line at least once per year; “[d]ocument any problems and maintain all components to prevent failure that could lead to fish escapements;” and “conduct inspections after any major storm event or physical accident involving the pen structures or moorings, and make any repairs necessary.” Permits, Condition S6.F. Upon information and belief, Cooke has violated these requirements at all eight of its net pen facilities located in Puget Sound by failing to conduct the required inspections, repairs and replacements, failing to document problems, and failing to maintain components to prevent failures that could lead to fish escapements. These violations have occurred on each and every day during the last five years and continue to occur every day.

#### **G. Violations of the Fish Release Prevention & Monitoring Plan Requirements.**

The Permits require Cooke maintain a Fish Release Prevention and Monitoring Plan that includes the identification and implementation of technology that will minimize fish escapements and procedures for routinely tracking the number of which within the pens, the number of fish lost to predation and mortality, and the number lost due to escapement. Permits, Condition S7.1, 6. Cooke must submit an Annual Fish Release Report to Ecology by January 30th of each year that summarizes release data for the prior year, including, to the extent possible, all fish released to waters of the state, including all

Significant Fish Releases, and the cause of all releases. Permits, Condition S7. Cooke has violated these requirements at all eight of its Puget Sound net pen facilities by failing to identify and implement technology that will minimize fish escapements, failing to implement procedures to track the number of fish in the net pen and those lost to predation, mortality and escapement, and by failing to submit annual Fish Release Reports that include all of the required information, including all of the fish released and the cause thereof.

**IV. Party Giving Notice of Intent to Sue.**

The full name, address, and telephone number of the party giving notice is:

Wild Fish Conservancy  
15629 Main Street N.E.  
Duvall, WA 98019  
Tel: (425) 788-1167

**V. Attorneys Representing the Conservancy.**

The attorneys representing the Wild Fish Conservancy in this matter are:

Brian A. Knutsen  
Kampmeier & Knutsen, PLLC  
833 S.E. Main Street, No. 318  
Portland, Oregon 97214  
Tel: (503) 841-6515  
Email: brian@kampmeierknutsen.com

Paul Kampmeier  
Kampmeier & Knutsen, PLLC  
615 Second Avenue, Suite 360  
Seattle, Washington 98104  
Tel: (206) 223-4088 extension 4  
Email: paul@kampmeierknutsen.com

**VI. Conclusion.**

The above-described violations reflect those indicated by the information currently available to the Conservancy. These violations are ongoing. The Conservancy intends to sue for all violations, including those yet to be uncovered and those committed after the date of this Notice of Intent to Sue.

Under Section 309(d) of the Clean Water Act, 33 USC § 1319(d), Cooke is subject to a separate daily penalty assessment for each violation (the current maximum daily penalty assessment is \$52,414 for each violation). In addition to civil penalties, the Conservancy will seek injunctive relief to prevent further violations under sections 505(a) and (d) of the CWA, 33 USC § 1365(a) and (d), and such other relief as is permitted by law. Also, section 505(d) of the CWA, 33 USC § 1365(d), permits prevailing parties to recover costs, including attorney's fees.

The Conservancy believes that this NOTICE OF INTENT TO SUE sufficiently states grounds for filing suit. The Conservancy intends, at the close of the 60-day notice period, or shortly thereafter, to file a citizen suit against Cooke Aquaculture Pacific, LLC under section 505(a) of the CWA.

The Conservancy is willing to discuss effective remedies for the violations described in this letter and settlement terms during the 60-day notice period.

Very truly yours,

Kampmeier & Knutsen, PLLC

Anacortes, Washington 98221

**Re: SUPPLEMENTAL NOTICE OF INTENT TO SUE UNDER THE CLEAN WATER ACT**

Dear Managing Agent:

This letter is submitted on behalf of the Wild Fish Conservancy (the “Conservancy”). This letter provides sixty days’ notice of the Conservancy’s intent to file a citizen suit or to amend and/or supplement a the Conservancy’s pleadings in a pending citizen suit against Cooke Aquaculture Pacific, LLC (“Cooke”) under section 505 of the Clean Water Act (“CWA”), 33 U.S.C. § 1365, for the violations described herein.

**I. Background.**

Cooke owns and/or operates eight commercial salmon net pen facilities located in Puget Sound, Washington, where Cooke produces Atlantic salmon. Three of these net pen facilities are located in Deepwater Bay of Cypress Island, three are located south of Bainbridge Island in Rich Passage, one is near Port Angeles, and one is north of Hope Island in Skagit Bay.

Cooke’s commercial salmon farms discharge pollutants to waters of the United States in a manner that is prohibited by section 301(a) of the CWA, 33 U.S.C. § 1311(a), unless, *inter alia*, authorized by National Pollutant Discharge Elimination System (“NPDES”) permits issued under section 402 of the CWA, 33 U.S.C. § 1342. Cooke is authorized to discharge waste materials associated with salmon net pen operations under eight NPDES permits issued by the Washington Department of Ecology (“Ecology”) on October 26, 2007, with expiration dates of October 26, 2012, but which have been administratively extended pending issuance of new permits, under NPDES permit numbers WA-003153-4, WA-003154-2, WA-003152-6, WA-003156-9, WA-003157-7, WA-003158-5, WA-003159-3, and WA-004089-4 (collectively, the “Permits”).

Starting on or about Saturday, August 19, 2017, one of Cooke’s net pen facilities located in Deepwater Bay of Cypress Island began suffering structural failures. This net pen facility suffered a near-complete structural failure and collapsed on or about Sunday, August 20, 2017.

The failure of these facilities has resulted in illegal discharges into Puget Sound of farmed Atlantic salmon, carcasses of dead fish, and massive amounts of debris and other pollutants. Currently available information suggests that these illegal releases are associated with Cooke's net pen facility known as "Cypress Site 2" (also known as "Site 2 – Deepwater Bay"), which is subject to NPDES permit number WA-003157-7.

The Conservancy issued a letter on August 24, 2017, providing notice of its intent to file a citizen suit against Cooke for certain CWA violations related to its commercial salmon farms in Puget Sound. This letter provides notice of the Conservancy's intent to sue Cooke for additional CWA violations.

## **II. Violations of the Sediment Sampling and Analysis Plan Requirements.**

The Permits establish a Sediment Impact Zone ("SIZ") for each net pen facility that consists of the area within a one hundred (100) foot perimeter of each net pen facility. Permits, Appendix A. When net pens are "moved or removed," the Permits require that Cooke "conduct Closure Monitoring in areas where the previous SIZ was established but is no longer in effect." Permits, Condition S2.B.4. "The goal of closure monitoring is to monitor the return of sediment quality to baseline conditions." Permits, Condition S4. Additionally, the Permits require that Cooke submit a Sediment Sampling and Analysis Plan ("SAP") to Ecology for review and approval "at least thirty (30) days<sup>1</sup> prior to [the] anticipated site closure or significant move." Permits, Condition S2.B.4. Closure monitoring must include the parameters listed in Condition S2.A.4 of the Permits and include benthic infaunal abundance as described in Condition S2.D. Permits, Condition S4.

Upon information and belief, Cooke has violated these requirements by moving and/or closing/removing one of its net pen facilities located in Deepwater Bay of Cypress Island (believed to be the Cypress Site 2) from the SIZ without complying with the provisions described above—including the requirements to conduct Closure Monitoring and to submit a SAP to Ecology for approval at least thirty (30) days prior to moving or removing/closing the facility. These violations began on or about August 19, 2017, have occurred on each and every day since that date, and continue to occur every day.

## **III. Party Giving Notice of Intent to Sue.**

The full name, address, and telephone number of the party giving notice is:

Wild Fish Conservancy  
P.O. Box 402  
15629 Main Street N.E.  
Duvall, WA 98019  
Tel: (425) 788-1167

---

<sup>1</sup> The Permits also require, inconsistently, that Cooke submit a SAP "at least 60 days" before any planned move or removal. Permits, Condition S4.

**IV. Attorneys Representing the Conservancy.**

The attorneys representing the Wild Fish Conservancy in this matter are:

Brian A. Knutsen

**V. Conclusion.**

The above-described violations reflect those indicated by the information currently available to the Conservancy. These violations are ongoing. The Conservancy intends to sue for all violations, including those yet to be uncovered and those committed after the date of this Notice of Intent to Sue.

Under Section 309(d) of the Clean Water Act, 33 USC § 1319(d), Cooke is subject to a separate daily penalty assessment for each violation (the current maximum daily penalty assessment is \$52,414 for each violation). In addition to civil penalties, the Conservancy will seek injunctive relief to prevent further violations under sections 505(a) and (d) of the CWA, 33 USC § 1365(a) and (d), and such other relief as is permitted by law. Also, section 505(d) of the CWA, 33 USC § 1365(d), permits prevailing parties to recover costs, including attorney's fees.

The Conservancy believes that this SUPPLEMENTAL NOTICE OF INTENT TO SUE UNDER THE CLEAN WATER ACT sufficiently states grounds for filing suit. The Conservancy intends, at the close of the 60-day notice period, or shortly thereafter, to file a complaint or to supplement and/or amend an existing complaint against Cooke Aquaculture Pacific, LLC under section 505(a) of the CWA.

The Conservancy is willing to discuss effective remedies for the violations described in this letter and settlement terms during the 60-day notice period.

Very truly yours,

Kampmeier & Knutsen, PLLC
